

Free 90 Day Scan Back from IRONSCALES

See what your current Office 365 email protection technology is missing

Integrate IRONSCALES with your Office 365 email environment in just 2 clicks and quickly see what your current solution has been missing

No matter how big or small your company is, chances are that harmful phishing threats such as Business Email Compromise, VIP impersonation and Account Takeover are slipping past your current **email security defenses and finding their way into your inboxes.**

Legacy email protection technologies like Secure Email Gateways (SEGs) sit in front of your inbox trying in vain to block phishing attacks. IRONSCALES protects from inside the mailbox, where it can find advanced phishing threats like time-detonated links that would be missed by your SEG.

Don't think that could make a difference? Find out for yourself and discover phishing threats that are slipping past your current defenses with our free 90 Day Scan Back service. Set up takes less than five minutes with your Microsoft Office 365 environment, allowing the IRONSCALES platform to quickly start scanning for threats.

After the scan back is complete, one of our security specialists will walk you through what we discovered and describe the impact these threats pose to your environment. So what are you waiting for? Did we mention this is absolutely free? [Click here](#) now to get started discovering phishing threats hiding in your organization's mailboxes today.

Why IRONSCALES?

-  We are fast to deploy and simple to manage; connect via API in as few as two clicks; user-friendly dashboards help you to see what's happening in your environment, make changes, see reports and initiate phishing training campaigns; free up your time to spend on more challenging security issues and leave email security to us
-  Protection against advanced phishing attacks: Stop modern day attacks like Business Email Compromise, Account Takeover and more. Our AI, named Themis, will find and defeat threats in just milliseconds
-  Protect and train your end users: Security Awareness Training is built into the solution; test your end users with real-world examples of the latest types of phishing emails; easily identify your most targeted employees & departments and help them to stay vigilant against attacks
