

Solution Brief

Contextual Email Banners

Just-in-time end user notifications of potential email attacks

No matter how good your email security solution is, reality is that your end users are the absolute last line of defense. Alert them against potentially malicious attacks with just-in-time warning banners directly in a suspicious email.

Our contextual banners provide warnings for the following:

- First-time sender
- Business Email Compromise (BEC) Language
- Sender Address Spoofing
- Exact Display Name Impersonation
- Similar Display Name Impersonation
- Email Domain Look-Alike
- Company's Name Appears in Display Name
- Known Address in Display Name

“Companies need a solution that warns their end users of potential attacks in an intelligent, laser-focused manner so as not to cause banner fatigue.”

The Challenge

Advanced phishing attacks are constantly evolving and even the most intelligent machine learning/AI-powered email solutions don't catch everything. Legacy email technologies are known to put banners into every email sent from outside the company, leading to end users ignoring the notifications.

Companies need a solution that warns their end users of potential attacks in an intelligent, laser-focused manner so as not to cause banner fatigue.

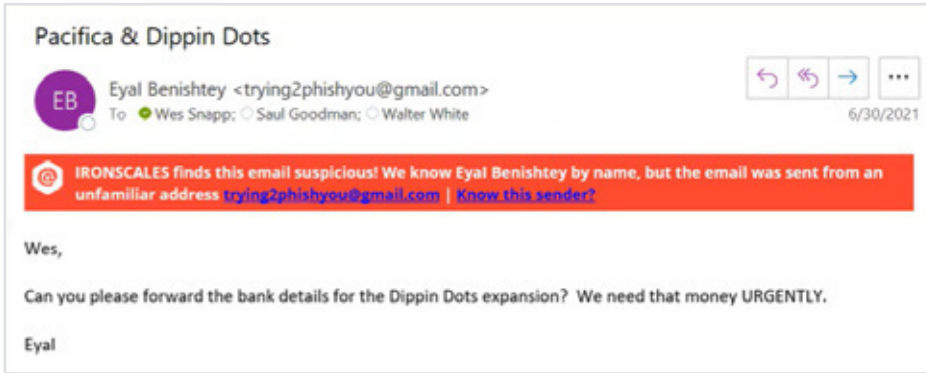

The Solution

IRONSCALES' just-in-time contextual banners are automatically injected into emails flagged as suspicious by our Machine Learning (ML) models.

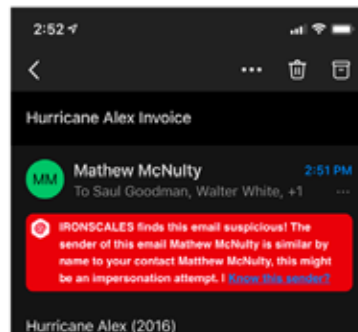

-  Each banner provides specific details about why our ML models have determined that the email is suspicious
-  Customize the banners however you like, including such things as adding your logo, escalation point of contact details and more.
-  The 90-day scan back that is done when you are onboarded will identify a baseline of external senders that each of your end users communicates with on a regular basis, eliminating the need for first-time sender banners for those identified external senders.

The banners work seamlessly regardless of device or email client:

Desktop View

Mobile View

With banners, warnings and intuitive self-management, it's easy to prove that IRONSCALES is protecting our company. And it really is essential to have the visual tools that IRONSCALES provides to show our board and to easily demonstrate that our email security system is secure.

NEIL STEIN, SVP OF TECHNOLOGY SERVICES AT ORTHOCAROLINA

Why choose IRONSCALES?

1. We are fast to deploy, simple to manage and highly effective in stopping all types of email attacks
2. We deliver email security in the mailbox and defend against modern email threats
3. We integrate both email security and awareness training into a single offering
