

Security For Data In Motion

Always Know What, When, And Where Sensitive Data Is Being Sent

Riscosity is the data flow security platform built to equip teams with the tools needed to maintain full visibility of data in transit and to remediate any risks before they reach a 3rd-party. Within seconds, teams get continuous visibility into where data is going, can redact or redirect sensitive data, and simplify how they meet data security, privacy and compliance requirements

How It Works

Deploy Riscosity's zero-agent solution seamlessly in your existing technology stack to monitor, identify, and protect all 3rd party connections in real-time.

3rd Party Cataloging

A full and accurate catalog of all digital security risks that any vendor could expose your organization to.

Built-in Compliance Auditing

Comply with regulatory requirements through continuous monitoring of 3rd party data transmissions.

Data Flow Posture Management

Continuously monitor and block 3rd party APIs from sending the wrong data to the wrong place.

OS Library Data Management

Ensure that the use of 3rd party components won't compromise your company data or the product that you build.

In-Transit Data Guardrails

Map data sub-processors and the information shared with them within minutes in order to restrict flows as per business needs.

In Flight Data Redaction

Automatically replace detected sensitive data, tuned to your business logic, with redacted inputs.

Get Started with SRC Cyber Solutions

At SRC Cyber Solutions LLP, we provide Next Generation, Highly Automated, User-Friendly and scalable solution. Our robust solutions include Comprehensive Email Security, Automated Patching and Endpoint Management, Asset Risk Visibility and Management with Policy Enforcement (ARM), Third-Party Data Flow Security solutions, Agentless Micro Segmentation, Endpoint Management and Compliance Platform and an Online Gamified Simulation Platform for Cybersecurity Training.
