Riscosity | riskrecon by (Mastercard)

Overview

65% of an organization's assets sit on infrastructure owned by an external vendor. Security teams need granular and accurate visibility into the security posture of their entire 3rd-party ecosystem to reduce their risk landscape. With Riscosity and Risk Recon by Mastercard, teams can discover and monitor third-party risks and quickly act on the threats that would have the highest potential to damage your organization. By using both, you safeguard your digital ecosystem from 3rd-party risk, maintain a tight grip on any sensitive data in transit, know who your data is going to, and can take action to ensure sensitive data never goes to the wrong endpoint.

Use Cases

Identify if customer data is leaking into disallowed geographical jurisdictions. No agent installation needed, zero changes to codebase.

Accurately identify and correct unplanned customer data being sent to 3rd party data sub-processors. Reduce security and legal liability in minutes.

Automatically view prioritized (high – medium – low) third-party findings based on issue severity and value at risk, including the magnitude of impact if system is compromised.

Benefits

- **Comprehensive visibility** – Maintain a 360-degree view of where all data is flowing and which 3rd parties are accessing sensitive data – with zero engineering support needed.

- **Data-driven risk scoring** – Gain accurate risk ratings that enable your team to understand which data flows going to high-risk vendors contain sensitive events like PII and PHI, to then cross-correlate ratings with organizational guardrails (ie. DPAs and SSCs).

- **Simple executive reporting** - Keep organization leaders and stakeholders informed about the progress of cybersecurity initiatives, allowing them to track cybersecurity alignment against overarching company goals.

Get Started with SRC Cyber Solutions

At SRC Cyber Solutions LLP, we provide Next Generation , Highly Automated , User - Friendly and scalable solution . Our robust solutions include Comprehensive Email Security , Automated Patching and Endpoint Management, Asset Risk Visibility and Management with Policy Enforcement (ARM), Third - Party Data Flow Security solutions , Agentless Micro Segmentation , Endpoint Management and Compliance Platform and an Online Gamified Simulation Platform for Cyber security Training . Visit www.srccybersolutions.com to learn more.
