

# CASE STUDY

## Asset Visibility - Network and Peripherals

### Scenario

Complete and accurate visibility into network and peripheral devices.

### Challenge

Network visibility is a foundational element of an IT organization. As devices exponentially increase, enterprises struggle to know with full confidence what is connected to their network. Traditional visibility tools use Layer 2 (MAC) and Layer 3 (TCP/IP) network data to discover and identify their devices. This is problematic as at Layers 2 and above, devices without a digital existence, such as passive taps, unmanaged switches, MiTM attack tools or 'spoofed' devices go undetected.

### Result

Enterprises lack 100% visibility. Absent of an examination of Layer 1, IT organizations do not have all of the information necessary to mitigate risk coming from their hardware infrastructure – you cant secure what you cant see.

### HAC-1 Solution

HAC-1 collects physical Layer 1 (analog) information from a network switch and endpoints to detect and identify all devices. This approach provides continuous real-time visibility of all network and peripheral devices within the environment. No additional hardware needs to be deployed. HAC-1 provides accurate visibility, control, and risk mitigation of all devices

## Key Challenges

- Total visibility is required into all IT/OT/IoT assets – Knowing what you have , protecting what you own.
- Compromised devices impersonating as legitimate devices cannot be identified with existing solutions.
- Physical layer MAC-less devices cannot be identified by existing NAC/IoT security solutions as they are MAC-based.

Enterprises are challenged with gaining accurate visibility into hardware assets, especially in today's extremely challenging IT/OT/IoT environment. In order to address this challenge, ultimate visibility into your Hardware assets is required, regardless of their characteristics and the interface used for connection as attackers.

Sepio Systems is the leader in Visibility, Control and Mitigation of hardware assets and is disrupting the cybersecurity industry by uncovering hidden hardware attacks operating over network and USB interfaces. HAC-1, which orchestrates Sepio's solution, identifies, detects and handles all network devices including peripherals; no device goes unmanaged.

**Give us 24hrs.**

We will provide you with complete visibility and control for hardware devices and augment hardware risk mitigation.

## HAC-1 Benefits:

**Complete Visibility of all Hardware Assets:** With all devices and anomalies detected, enterprises benefit from a greater overall cybersecurity posture. Gaining full visibility of all hardware devices from endpoint peripherals to connected devices (IT/OT/IoT), Sepio uses unique physical layer hardware fingerprinting technology and data augmentation from endpoints and networks.

**Full Control through Predefined Policies:** Enterprise-wide policies enable compliance, regulation and best practices. With predefined templates and no baselining or whitelisting, and no requirement for a clean environment start, Sepio provides a fast and easy setup.

**Rogue Device Mitigation (RDM):** Threat mitigation upon discovery of rogue or threatening devices. Integrations with existing security platforms such as NACs and SOARs for mitigation and remediation enhancements.

## Where Are We In The Cyber Security "Jungle"?

### ABOUT SEPIO

Founded in 2016 by cybersecurity industry experts, Sepio's Asset Risk Management (ARM) platform sees, assesses, and mitigates all known and shadow assets at any stage. The only trafficless solution, Sepio is infinitely scalable to protect the company's decentralized, uncontrolled ecosystem as fast and often as anyone, anywhere connects any assets. Sepio provides actionable visibility with the Asset Risk Factor (ARF) score based on a unique Asset DNA generated for each asset at its physical source, reflecting actual business, location, and rules. Sepio radically improves the efficacy of NACs, EDRs, XDRs & Zero Trust layer solutions that simply see only the assets they are there to protect. ### ABOUT SRC CYBER SOLUTIONS LLP

At SRC Cyber Solutions LLP, we provide Next Generation, Highly Automated, User-Friendly and scalable solution. Our robust solutions include Comprehensive Email Security, Automated Patching and Endpoint Management, Asset Risk Visibility and Management with Policy Enforcement (ARM), Third-Party Data Flow Security solutions, Endpoint Management and Compliance Platform and an Online Gamified Simulation Platform for Cyber Security Training attacks.
