SentinelOne and Automox
Endpoint Security Meets Automated IT Operations

As corporate networks become more technologically diverse, patch management and cyber hygiene solutions are struggling to keep up. Often, businesses are forced to adopt several tools that require heavy training, dedicated on-site resources, and multiple dashboards to manage the basics of endpoint hardening. This increasing complexity affects how quickly organizations can patch vulnerabilities, often leaving their corporate systems ripe for attack and their endpoint protection platforms working harder to keep endpoints secure.

ABOUT THE INTEGRATION

SentinelOne and Automox have partnered to deliver an end-to-end vulnerability discovery and remediation solution. The integration enables IT and security teams to quickly identify and remediate vulnerabilities using automated patching and configuration.

Important threat visibility data can be forwarded directly from SentinelOne to Automox, including missing patches or configurations. Then, identified vulnerabilities can be automatically remediated within the Automox® console, reducing the burden on IT and security operations center (SOC) analysts and freeing up valuable cycles to address other security threats.

INTEGRATION BENEFITS

- Automated patching & configuration
- Automox Worklets™ for limitless task customization
- Reduced time to remediate
- Deploy SentinelOne® agents worldwide instantly

KEY BENEFITS

The joint solution delivers a powerful cloud-enabled, end-to-end vulnerability discovery and remediation solution that empowers IT operations to:

Automate patching & configuration
Continuously patch and configure Windows®, macOS®, and Linux® operating systems as well as third-party software, with no reliance on on-premises infrastructure.

Increase extensibility
Create custom tasks using scripts across any managed device with Automox Worklets™.

Reduce time to remediate
Mitigate discovered and reported endpoint vulnerabilities.

Effortlessly deploy SentinelOne with Automox
Immediately deploy, provision, and enforce the SentinelOne agent across Windows, macOS, and Linux devices worldwide.

HOW IT WORKS

As a cloud-native IT operations solution, Automox naturally complements the SentinelOne Singularity Platform. Automox and SentinelOne together provide continuous endpoint telemetry with no reliance on on-premises infrastructure or VPNs, creating the ideal solution to secure and manage distributed workforces and multicloud instances. With the two integrated solutions, an organization can automate prevention and prioritize remediation at scale with Automox while detecting critical threats and coordinating response measures with SentinelOne.

The integration forms a seamless workflow between ITOps and SecOps teams, proactively minimizing exposure and reducing the time to detect and time to respond. Organizations can take preventative measures with Automox by automating patch distribution across endpoints to immediately apply updates for known vulnerabilities. If a vulnerability is exploited or an attack is initiated, SentinelOne provides threat data and detection capabilities to identify vulnerable or targeted endpoints that can then be remediated through the Automox console. Within Automox, the SentinelOne identified hosts appear as tasks for administrators to quickly review, prioritize and remediate within seconds. This closes the loop on vulnerabilities and brings organizations' infrastructure up to date, improving cyber hygiene and minimizing risk and exposure to vulnerabilities.

BETTER TOGETHER

Together, SentinelOne and Automox significantly reduce the time to remediate vulnerabilities or threats in customers' infrastructure. With the integrated solution, IT and SOC analysts gain back valuable time to address other security threats and IT priorities.
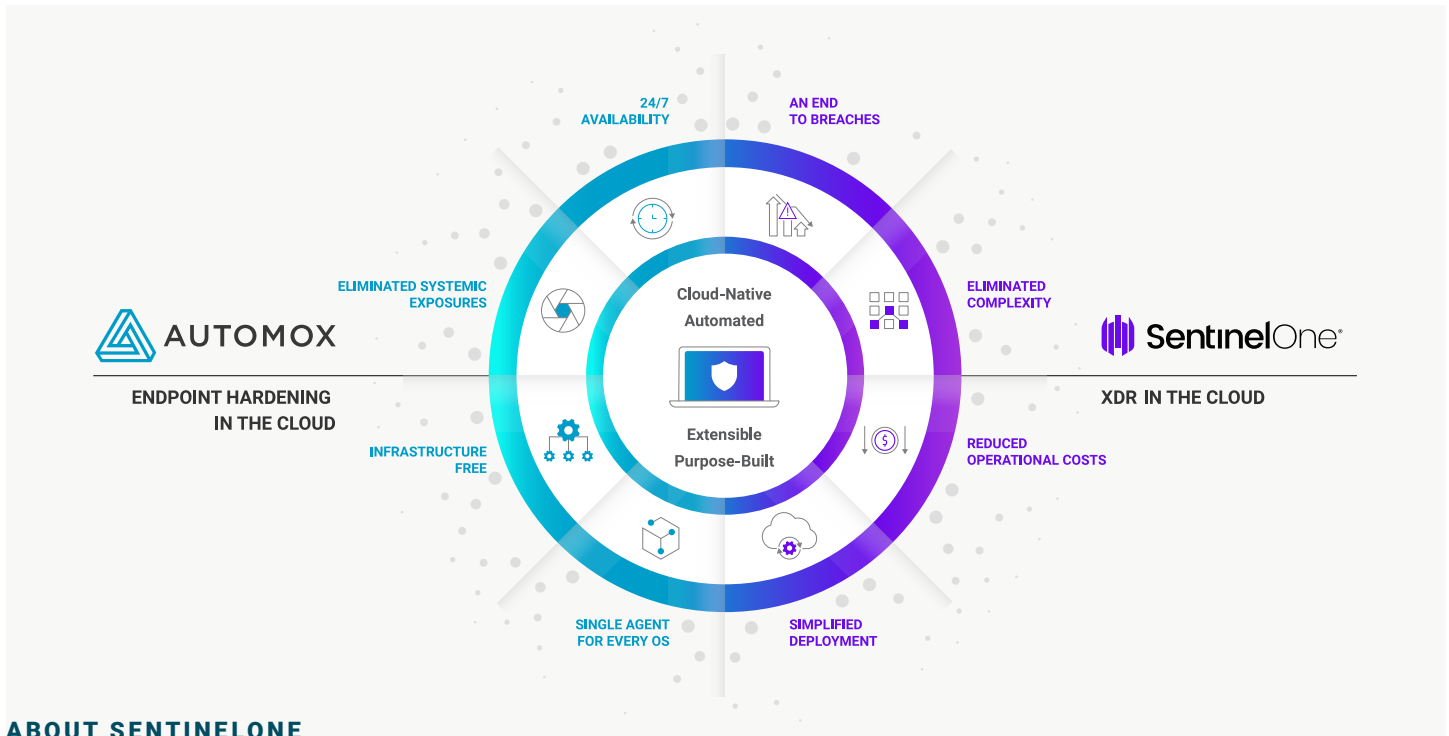

ABOUT SENTINELONE

More capability. Less complexity. SentinelOne is pioneering the future of cybersecurity with autonomous, distributed endpoint intelligence aimed at simplifying the security stack without forgoing enterprise capabilities. Our technology is designed to scale people with automation and frictionless threat resolution. Are you ready?

ABOUT AUTOMOX

Automox is a globally accessible endpoint hardening solution that enforces operating system (OS) and third-party patch management, security configurations, and custom scripting across Windows, macOS, and Linux from a single, intuitive, cloud-based console. IT and SecOps can quickly gain control and share visibility of on-premises, remote, and virtual endpoints without the need to deploy costly infrastructure. Automox dramatically reduces corporate risk while raising operational efficiency to deliver best-in-class security outcomes, faster and with fewer resources.

ABOUT SRC CYBER SLOUTIONS LLP

At SRC Cyber Solutions LLP, we provide Next Generation, Automated and User-Friendly solutions in partnership with AUTOMOX for Patch and Endpoint Management, IRONSCALES for Comprehensive Email Security and Anti-Phishing Protection, THREATX for WAAP (WAF++) with an Attack-Centric approach for Web Application and API protection and Project Ares for Online Gamified Simulation-based Cyber Security Training.
